SOLID

Krion® Solid is composed mostly of high purity white mineral (ATH). This gives makes the material hard, resilient and pleasant to the touch.

Natural style, pleasant to the touch and resistant, among its main characteristics

The Krion® Solid bathroom series are entirely made with the Krion® Solid solid surface, which allows monolithic pieces to be obtained from straight-shaped and symmetrical designs, even curved and oval-shaped designs, always maintaining uniform aesthetics and offering excellent visual continuity.

Thanks to the pure white of Krion® Solid, natural-style bathrooms are achieved with a pleasant texture to the touch, to which multiple technical benefits can be added, such as its resilience. Each series is distinguished by its own character, but always maintaining an essence of design and exclusivity.

From Krion PORCELANOSA Grupo comes NER, the new worktop collection and bathroom unit designed by Fran Silvestre.

With Krion® Solid as the material of choice thanks to its strength, uniformity and characteristic blend, NER worktops stand out for their sharp, polyhedral shapes. Their straight lines reveal a basin with a fine opening, which runs through their entire basin, through which they evacuate water easily thanks to the slope of their bottom. The technical part of the washbasin, such as the drain already prepared to attach directly to the siphon, is hidden from view, offering a clean and minimalist image.

A change of
look for
your bathroom

SHARP AND POLYHEDRAL SHAPES

NER worktops can be installed on a unit of the same series or a metal Smart chassis. In addition, they are compatible with other furniture such as those of the One and Smart series, multiplying its creation capacity.

Ideal bathroom

“Sustainability in housing construction is becoming increasingly important and eco-friendly house design is in vogue.”

The design of sustainable houses is increasingly taken into account by architects and designers from all over the world, as well it should be: sustainable construction is no longer an option, but a fact.

In recent years, climate change has forced builders and designers to come up with more environmentally friendly options, and they are achieving good results. Predictions suggest that if we reduce the demand for less sustainable materials, such as steel or cement, housing

construction can globally reduce its emissions by 38% by 2050.

Sustainable homes are no longer something of the future, but a complete reality that we can see and feel. To achieve sustainable design in our home, it is essential to use materials that are not only environmentally friendly during manufacture, but also once they have reached the end of their useful life.

KRICN SOLID

Smart composed of Krion® Solid worktop and suspended wooden furniture in different finishes.

The oval insert basin, consisting of one or two basins, has an integrated overflow. It can be installed independently or accompanied by a suspended basin with large pull-out drawers, single or double, and finishes in Oak Taupe, Oak Ash, Deep Blue, White and Beige wood.

The Smart series also includes as an option a metal chassis with shelf.

It is designed to be installed quickly, and it is easy and simple to maintain. All this, without sacrificing aesthetics and functionality.

A good day starts in the bathroom

If we want our bathroom to last over time without having to carry out major renovations, we must avoid getting carried away by any eccentric trend that will be outdated in a couple of years. We should install simple and easily combinable environments and opt for mobile elements that facilitate the renovation and are able to completely change the appearance of the bathroom.

KRION SOLID

NEST

BEAUTIFUL

SYMMETRY

SYMMETRY

Nest presents gently rounded lines, inspired by asymmetrical shapes with an exquisite presence, where design, like water, flows smoothly and naturally.

This careful design with no corners allows for fast and easy maintenance and cleaning, prolonging its durability. It has a practically imperceptible perimeter top unit that favors hygiene and prevents splashes.

The series consists of several elements and materials that blend together to offer a wide range of options: countertops, units, metal chassis and accessories, with Krion® Solid finishes on the countertops and lacquered in White or Black in the rest of the elements. Available in sizes 61 x 50, 80 x 50, 120 x 50 and 152 x 50 cm.

The Nest worktop does not require chassis for its assembly, so its installation is very simple, and the basin has a built-in large capacity overflow to quickly evacuate the water.

**ORGANIC
SIMPLICITY**

KRION SOLID

Simple and asymmetrical: the basin of the Nest worktop. Its shape simulates a drop of rain and its progressive depth allows the water to flow smoothly.

CLEANING IN THE BATHROOM

For our bathroom, we must look for elements that avoid the accumulation of dirt and minimize the cleaning effort since there are many areas that must be treated in order to correctly clean this room. In addition to the most important areas to clean, such as the bathtub or shower, the washbasin and the toilet, as well as the walls and floors, it is necessary to take into account aspects such as humidity and mold.

Other important elements to clean are the shower screen, the mirror or the ventilation grid, in addition to the small appliances that we have in the bathroom. With an organized bathroom, this task will be much easier for us.

Kole

minimalist

Krion has relied on basic geometric shapes to create the Kole worktop collection. Simple and practical. Available with integrated overflow.

Compatible with Wave, Nest, Smart, One, Natural and Ner units, which makes it perfect to fully customize your bathroom.

ITS DESIGN
PROVIDES THE
WORKTOP WITH
EXCELLENT
FUNCTIONALITY

RAS consists of countertops and basins made from Krion® Solid, with a hidden drain and trim made from the same material. The series is completed with a wide range of auxiliary units in different finishes: Natural Walnut Tree, Black Lacquered, Beige Lacquered and White Lacquered. The sum of these elements gives the Ras series a high degree of functionality and customization, with a refined aesthetic.

SUSTAINABILITY IN THE BATHROOM

MORE SUSTAINABLE AND ECO-FRIENDLY BATHROOMS

Sustainability and care for the environment are increasingly rooted in our home customs. The bathroom is one of the rooms where we can do the most to respect the environment.

These are some of our tips to put into practice.

Save water

According to the World Health Organization (WHO), a standard shower lasts 10 minutes and uses 200 liters of water (20 liters per minute). To save this type of natural resources, the WHO recommends shortening the duration thereof to 5 minutes in order to save up to 100 liters of

water, in addition to avoiding CO₂ emissions derived from the energy invested in heating it.

Install flow and pressure reducers in fittings and double-discharge tanks.

Save energy

The heater should not be too far away from the bath to prevent heat loss. As for the ideal temperature that a water heater should have, it should range between 50-60°. From this temperature, using energy unnecessarily and increasing problems with limescale.

For more efficient lighting, use energy efficient LEDs or bulbs.

They last longer and save 80% more energy than traditional lights.

Waste

Avoid throwing disposable wipes into the toilet because, given its composition with a type of plastic fiber, its decomposition takes more than 600 years, in addition to causing problems to the sewer system.

We should not use the toilet as a bin or wastepaper basket, so do not throw anything inside that does not decompose immediately in contact with water.

Krion Shell® is an Engineered Mineral Composite developed by Krion Porcelanosa Grupo, made up of two parts. A structural body formed mainly by minerals (dolomites) with Eco resin, and a solid and homogeneous outer layer also composed of mineral (ATH) and resin.

Most of the base body of Krion Shell® is made up of minerals, abundant on Earth (dolomite). To bind the minerals, an Eco resin made from plastic waste is used. With the use of recycled PET, waste is given a new life, minimizing the consumption of the planet's resources.

KRION 

It uses at least 5%
plastic waste in its total
composition

SCS Global Service, an independent North American entity leader in environmental certifications, verifies and guarantees that all Krion Shell® certified products contain a minimum of 5% of plastic waste of their total weight in their total composition, thus committing to more sustainable and environmentally friendly manufacture.

FUNCTIONAL DESIGN THAT MAKES CLEANING EASY
AND AVOIDS SPLASHING

One, made up of various worktops and basins, stands out for its straight lines and the predominance of square shapes throughout its structure. Its minimalist design allows a black metal structure to be incorporated into the worktops, or a unit in a Vulcano Grey or white tone that stands out for its large soft close drawer and large metal rail.

Made with Krion Shell® technology, the One Series has a virtually imperceptible perimeter top unit that promotes hygiene and prevents splashing, making it easier to clean and maintain.

KRION SHELL®

Spirit

Ethereal design,
able to withstand any
pace of life

Spirit, worktop with integrated minimalist air basin made with Krion Shell® technology that guarantees excellent quality and durability. Krion presents a range of worktops available in: 61, 80, 100, 110, 120 and 150 cm, with a thickness of only 15 millimeters. We can find all these formats in white and gloss and matte finishes.

In addition, this series is compatible with the furniture of the Smart, One, Wave, Natural and Ner series. The Spirit series has a floor structure available in matte black. It integrates a lower shelf lacquered in white color that increases the storage capacity of the bathroom.

CUSTOMIZE YOUR BATHROOM

Adapt it to your style. Customize it and make it place of your own.

Over the course of our lives, we spend an average of two years in the bathroom. Do not allow it to become a mere stop-off point, homogeneous and lifeless. While it is true that bathrooms are the most functional rooms of the house, this does not mean they have to be cold, unstylish places.

Customization of interiors involves adapting the lifestyle, the way of relating to others and the tastes and needs of a person to the different elements that make up your home. From the distribution of space

to the choice of materials or colors of walls, floors and furniture. Everything is likely to be customized. Interior design can be the clear reflection of our identity and, at the same time, elicit an endless number of emotions.

Due to all the above, Krion Porcelanosa Bath has developed a multitude of bathroom elements of different formats, textures and colors that are can be combined to turn your bathroom into a totally customized room.

Natural

Worktop with a functional 12 cm skirt and rock texture

With a thickness of 12 cm, this model of the Natural worktop offers 2 options. a continuous skirt that maintains the uniformity of the rock texture across its front, or the incorporation of a towel rail by opening a hole in the skirt, providing extra space to the bathroom.

NATURAL TOP WORKTOP

Worktop made of Krión Shell® with a graphite finish and rock texture

Natural

The first worktop made
with Krion Shell® and
an embossed texture

This new Krion Shell® worktop balances functionality and aesthetics in a manner that is light and boasts a rock texture. Its light appearance and thickness of only 3 cm

makes it ideal for minimalist bathrooms and resistant to daily wear and tear, while it can be installed in a small or medium size.

Natural

Finishes with Rock texture

The Natural series is the first series of worktops with integrated washbasins that have rock texture on their entire surface, leaving a smooth texture inside the basins.

Their white finish brings distinction and sobriety, combining with any type of unit, coating or bathroom décor.

Natural
